Our steps towards a greener future

Now more than ever, sustainability should be top of the agenda when planning events and experiences.

We are committed to having a positive effect on our environment and drive change in our industry.

As a rental business we are happy to be contributing to our industry moving away from a single use mentality and towards one of long term sustainability.

We also want our company to make a significant difference on our environment so we have focused our efforts on four key areas of our business:
our products, our spaces, our deliveries and our green initiatives.

Take a look at the steps we have taken so far.

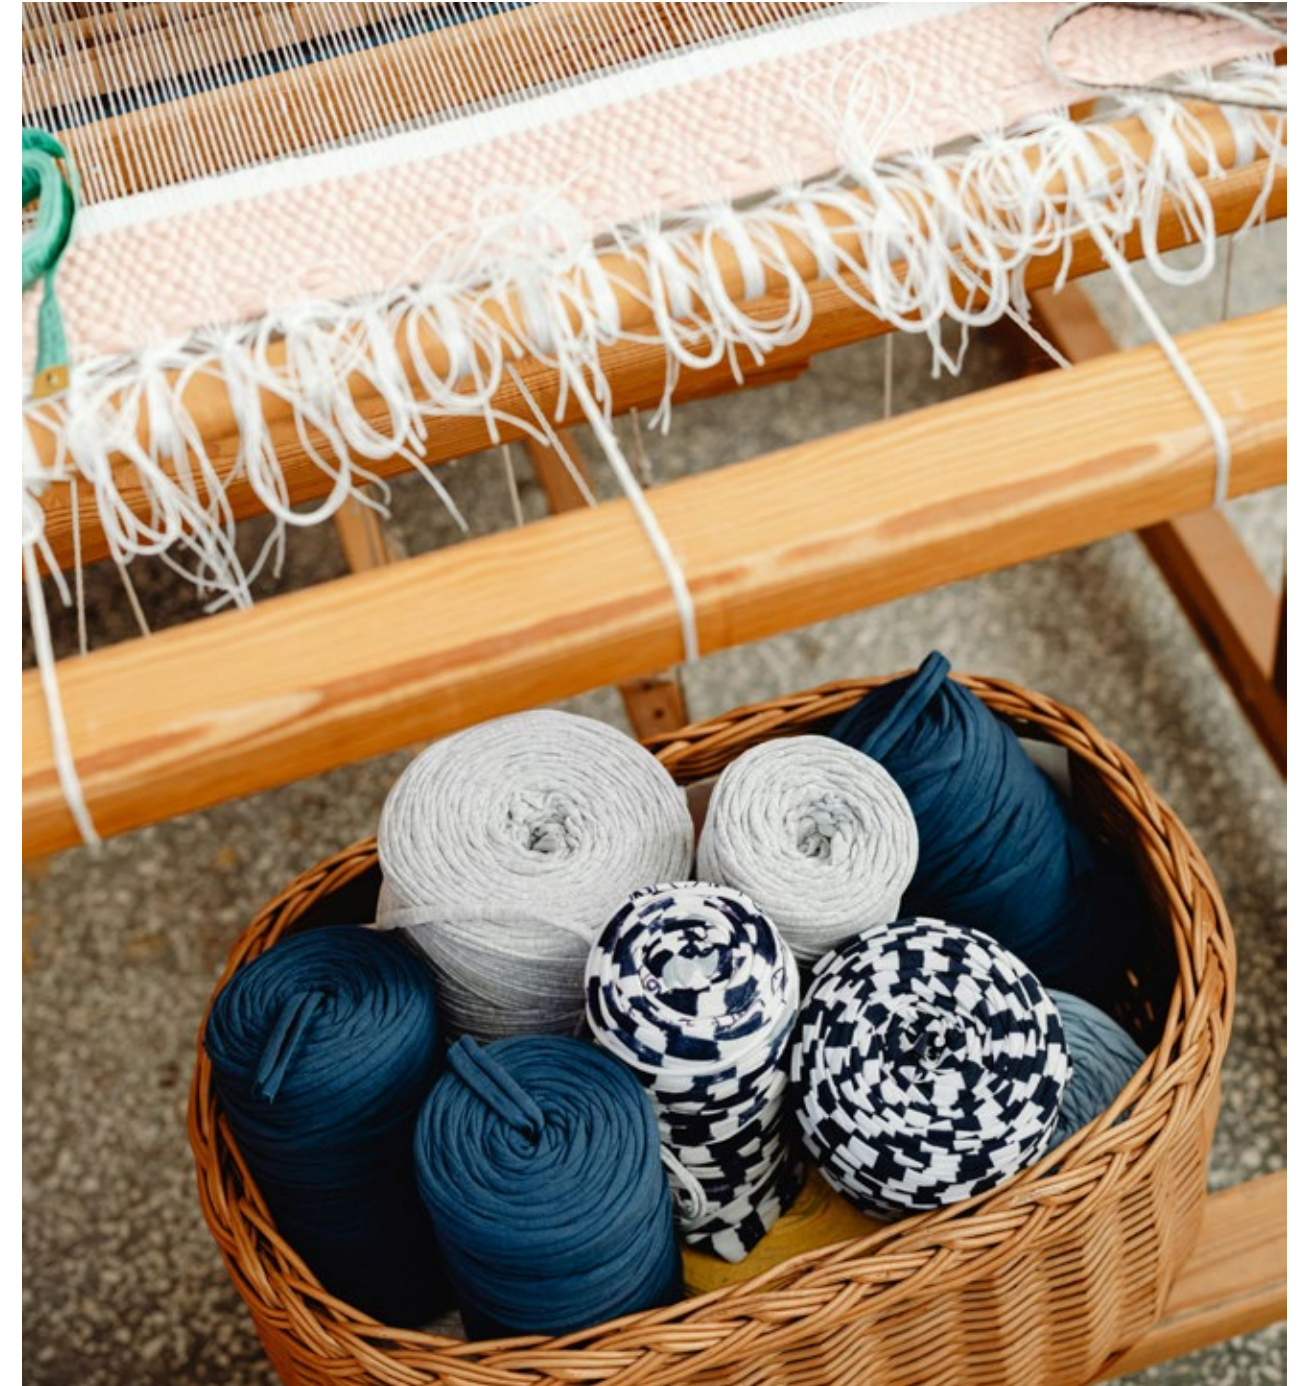

Products

MATERIALS

We prioritise eco-friendly materials and consider their environmental impact through their entire life-cycle, from extraction to production and finally to how they are disposed of. From furniture built with re-purposed scaffolding, reclaimed metal, railway sleepers and even boatwood.

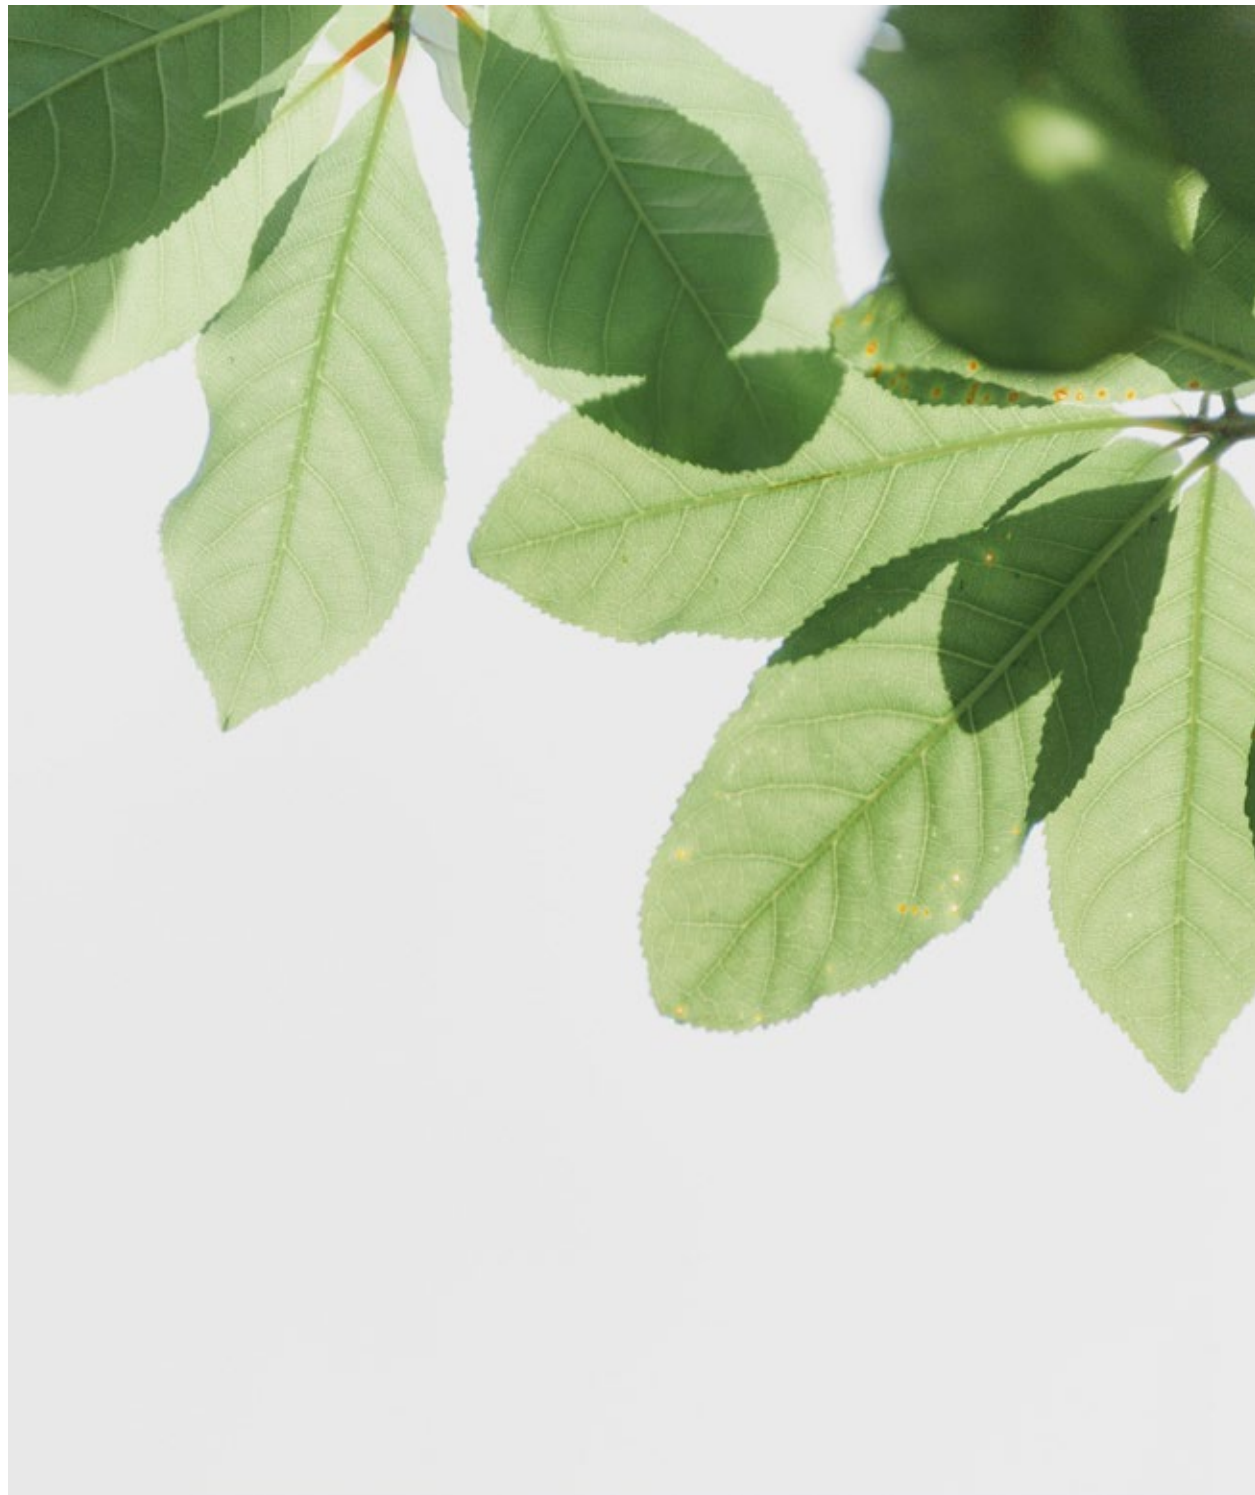

QUALITY

We have always prided ourselves in sourcing premium furniture, built with durability in mind to extend the life-cycle of the product, making sure the items can easily be up-cycled and repaired to keep the circular economy moving.

SUPPLIERS

We work with responsible suppliers that share our ethos and strive to produce quality products, whilst also working to reduce their carbon footprint. We look for suppliers that comply with the latest regulations on timber export, prioritise recycled and recyclable material and improve the energy efficiency of their production chain.

Our spaces

We're always committed to cutting down on all manner of waste in our space, be it paper, metal, plastic or cardboard.

Everything in our office and warehouse is separated and recycled to ensure that our impact on our local landfills are kept to a minimum.

We have tackled the use of single use plastic required to protect our furniture in transit by creating our own re-usable furniture covers to minimise the amount we use and recycling all our plastic packaging.

We've also replaced all our warehouse lights with LED bulbs to reduce our energy consumption.

We offer regular refresher sessions to our drivers and crew to make sure they're up to date on our recycling policies and best practises when it comes to driving and packing our vans, to ensure we always minimise our impact on the environment.

Deliveries

We have been replacing our fleet of vans with 'Euro 6' eco-friendly models, meaning we'll be able to reduce the CO2 emissions of our entire fleet by almost half.

We use the latest Adblue vehicles (Euro 6 Variant D) reducing the impact of harmful NOx emissions into the atmosphere by 67%, ensuring our fleet is ULEZ compliant.

We manage our logistics with the environment in mind, aiming to reduce our pollution by spending the least amount of time on the road as possible.

Green Initiatives

We're funding the highest standard of climate projects to help accelerate our way to a sustainable future.

We are members of Ecologi, an environmental organisation taking real action against climate change by planting trees across the world and funding carbon offsetting projects to "Gold standard certified".

Some of the initiatives we have already contributed to include:

Preventing deforestation in the Democratic Republic of Congo and using waste biomass to produce electricity in Chile.

To keep the circular economy moving, we donate the stock we no longer rent to local Bristol charities that support many worthy causes, such as relieving poverty and promoting social inclusion.
